

DOW SILICONES REMOVAL OF CTM MIXER

EnerMech worked with Dow Silicones on the removal of a CTM mixer and ancillary components from its operational location and loaded onto transport for offsite refurbishment activities by the OEM of the Mixer, through the supply of rigging and lifting services.

Client: Dow Silicones

Year: 2020

Product/Service: Cranes & lifting

Scope of work

Provision of engineering services for lift planning, risk assessments and method statements

Supply of specialist lifting equipment

Provision of personnel to carry out removal of CTM mixer and ancillary components (max load ~5te) to load onto transport for offsite refurbishment of items by OEM supplier

Project Delivery

EnerMech were able to provide support to our client's in-house rigging and lifting team to provide the necessary skills to undertake and deliver on their workscope to their tight timeline.

EnerMech collaborated effectively with Dow Silicones throughout the project, from initial review on site, where we produced a fully contracted removal workscope right through to final site survey visit.

The project was delivered on time and on budget and EnerMech were subsequently awarded reinstall scope following refurbishment of components.

Key Benefits

Delivered on short notice to challenging timescale

Delivered on time, on budget with no safety issues

Client able to successfully achieve removal of equipment to meet their own deadlines in terms of plant outage for refurbishment
