

EnerMech Valves

SEALWELD SERVICES

As the global distribution and service partners for Sealweld, EnerMech has the ability to collaborate with you to create integrated valve solutions that drive safety, productivity, and effectiveness in projects and operations.

CONVENTIONAL SEALING & ROUTINE VALVE MAINTENANCE

Our collaboration with Sealweld allows for us to adopt best practices via routine preventive maintenance programmes. Conducting regular and routine maintenance of valves utilising Sealweld's extensive products prevents any costly, unplanned downtime from unexpected valve failure.

CRITICAL VALVE ISOLATION – CHAMELEON SEALANT

For valves that have been deemed candidates for critical isolation, the introduction of Chameleon Sealant by trained and certified EnerMech technical professionals is a viable option to isolate a passing valve.

This process intervention option does not render a valve permanently in-operable, but provides a safe and reliable, non-permanent, isolation that can be subsequently removed or purged from your valve.

SEALWELD PRODUCTS

EnerMech are proud distributors of Sealweld products. We strive to create efficiencies through the development of these effective products.

- Lubricants
- Sealants
- Cleaners
- Stem Packing
- Injection Fittings & Adapters
- Sealant Injection Pumps
